# Comments Report

## 1. Course Structure

1.5) Additional comments for items 1.1 - 1.4

No data available.

## 2. Class Environment

2.4) Additional comments for items 2.1 - 2.3.

No data available.

## 3. Instructor Responsiveness

3.4) Additional comments for items 3.1 - 3.3.

- Prof. Al-Rawi was great at responding in a quick manner whenever I needed help. Wouldn't have been able to maintain a good grade if he had been even average in this regard.

## 4. Effectiveness

4.3) Additional comments for items 4.1 - 4.2.

- I wish there were labs like the skill assessments every week instead of the labs we were doing. I felt like I learned the most from doing those. Labs worked well for lecture though, just a little dry at times.

## 5. Overall

5.2) Additional comments concerning this course.

- I appreciated that in this course we used the virtual machines set up by the instructor instead of the machines in the Cisco course. The Cisco machines were set up specifically for the course so they behaved as expected, ours were different in some ways and this led to sometimes needing work around things differently. This helped me on a few occasions understand much more thoroughly what we were practicing. Troubleshooting is a valuable skill and I appreciate that we got to experience some of that in this course, I think it will also help me retain more of what we learned. The instructor was very responsive to email, and provided plenty of opportunity for questions in the labs.
- I felt like I was challenged more in the UNIX Fundamentals class. With labs being reasonably difficult it forced you to understand in order to get a good grade. I did get a better understanding of partitions and filesystems in this course though and was provided a good recap on everything else.
- Loved the course! Ready to learn more about Linux
- The use of the Cisco NetAcad curriculum combined with the use of JCCC's virtual machines caused a lot of confusion. It seemed that a lot of time was wasted trying to modify steps from the assignments to make them work for the virtual machines.
